二、报告目录及图表目录

Research fields: high-tech industry, information industry, biology industry, and national defense technology industry
Enterprises involved: Samsung Electronics, Shanghai Baosight, Shanghai Magnetic Levitation Transport Co., Ltd., Skyworth, Zhejiang Advanced Manufacturing Base, ASMC, Kegang Advanced Manufacturing, Zhejiang Advanced Manufacturing Institute of the Hong Kong University of Science & Technology Ltd.

Report Highlights China is becoming the world plant. The new round of industry restructuring brought about by economic globalization provides an opportunity for China to become a strong player in the manufacturing sector. The extensive application of information technology shortens the industrialization process dramatically. In China, under the guidance of the strategy of propelling industrialization with IT application, the manufacturing sector, which takes up more than 80% in the traditional industries, starts to undertake the important mission of revamping traditional industries. The Ministry of Science and Technology officially launched a major project for promoting IT application in manufacturing with a total investment of RMB 800 million yuan, and administers the key technology research and application demonstration project (MIE). The traditional manufacturing industry is weighed down with former SOEs. With low production efficiency, overstaffing, poor innovation capability, and outdated production process, enterprises in this sector face increasingly grim competition environment after China joined the WTO. At present, the development of China's advanced manufacturing industry is in full swing. The central government, local governments, and enterprises embarked on the renovation process of manufacturing in light of the actualities and their own needs. Beginning with an overview of the global trend, the report examines the development environment and present situation in China's advanced manufacturing industry, its advantages and disadvantages, characteristics, structure and revamping of industry chain, and compares the industry with foreign industries. It describes the present situation of China's advanced manufacturing industry. Local cases and mass latest data are cited to enhance persuasion and accuracy. Meanwhile, after examining problems identified in the survey, the report presents constructive recommendations.
